

Valentine Box Project

Your Goal: You will be creating a Valentine box where classmates can deliver your Valentine cards, enjoy a surprise and a moving part

Project Requirements:

- The box should be no larger than about 20 inches in width, depth or height.
- The opening to slip Valentines through must be at least 5" x 2"
- The container should be easy to move and carry.
- You must have fun completing this activity!
- Boxes should be brought to school on February 14th.
- You need to include at least one moving part on your box. This could be a hinge, something mechanical/robotic, a secret door, a pop up. Use your imagination.
- Include one surprise element. This is different from your moving part, but it could include one of the ideas above. I won't say too much, because this is your surprise, not mine!
